آواز

Awaaz

آپ کی آواز، آپ کا محلہ

Your voice. Your neighbourhood.

A voice-first, AI-verified community map: anyone — even someone who cannot read — reports a local problem by speaking, and the right responders are alerted.

awaaz.avezea.com

THE IDEA

One voice-first platform for every local problem

Instead of building one small app for one small problem, we built **one shared pipeline** that any community issue can flow through — so each new domain only needs a category and a responder.

Speak, snap or type
Urdu, Roman Urdu, Punjabi or English

AI understands & verifies
Category, urgency, duplicates, confidence

The right people act
Rescue 1122, fire, police, water, NGOs

Citizens see it resolved
Live status, notifications, accountability

HOW IT WORKS

Speak → understand → verify → route → resolve

Speak

Voice note, photo or text — or just talk to the AI

AI asks

Up to 3 short spoken follow-ups with tap-able icon answers

AI verifies

Links duplicates across languages, checks photos, scores confidence

Routes

Nearest matching responders get a push alert instantly

Resolved

Claim → in progress → resolved, citizen notified

Example: “سڑیٹ 5 کے سکول کے باہر گٹر کھلا ہے” → a **High-urgency Hazard** pin appears live and Rescue 1122 is alerted. A second person types “open manhole near the school on Street 5” → it joins the same pin → **Verified** → claimed → **Resolved**.

INCLUSION BY DESIGN

Built for people who cannot read — and everyone else

Talk to AI, not a form

A short spoken conversation collects what responders need: urgency, people affected, injuries, children at risk, landmark...

Voice guidance everywhere

Every key screen explains itself aloud in Urdu or English

Icons & colour over text

Big buttons, category colours and symbols — usable without reading

Spoken onboarding

Phone number, one spoken question, and the AI reads your profile back for trust

Works offline

Reports are saved on the phone and sent when the internet returns

Light & installable

A PWA built for low-cost Android phones, Urdu right-to-left

WOMEN'S SAFETY

A silent SOS that listens for danger

Easy to trigger
Hold the SOS button, press volume 3×, shake the phone, or the app-icon shortcut

Completely silent
No sounds — vibration only — so an attacker isn't alerted

AI threat detection
Recognises threats like "maar dunga", "bachao", "I'll kill you" in Urdu, Punjabi and English

Police alerted privately
Nearest police get live location and audio evidence — never shown on the public map

Logged for the user
Every SOS is recorded in the user's own SOS log

Hold 1.5 s · silent · private

BIG SCOPE, ON PURPOSE

One platform covers many domains — and 12 SDGs

Hazards خطرات · Floods سیلاب · Water & sanitation پانی · Fire آگ · Health صحت · Food rescue کھانا · Public safety حفاظت · Women's safety

1 No poverty	2 Zero hunger	3 Good health	5 Gender equality	6 Clean water	9 Infrastructure
10 Reduced inequalities	11 Sustainable cities	12 Less food waste	13 Climate action	16 Peace & justice	17 Partnerships

Every domain shares the same pipeline: adding a new one needs only a category and a responder — breadth is our design strength, not a lack of focus.

FOR RESPONDERS & CITIES

Verified reports, routed to the right people

Live dashboards

Rescue 1122, fire brigade, police, water authority, shelters, food banks and health NGOs

Instant alerts

Push notifications to the nearest matching organisation

Claim → resolve

Every status change reaches the citizen in real time

Food rescue

Leftover food → servings estimate → safe-until countdown → shelter pickup

AI-assessed & accountable

Every AI output is labelled; people confirm, dispute and decide

Privacy first

Reporter identity never public; SOS private to police

Admin console — one place to see every report, pin, user, organisation, assignment and SOS, live.

TECHNOLOGY & RESPONSIBLE AI

Built with

OpenAI
Speech-to-text, understanding, conversation, photo checks, embeddings, voice

Google Gemini
Gemini models registered in the AI model registry

Firebase Cloud Messaging
Push notifications to responders and citizens

Supabase
Postgres + PostGIS + pgvector, Auth, Storage, Realtime, Edge Functions

Leaflet + OpenStreetMap
Live map, clustering, service areas

React PWA on Vercel
Installable, offline-ready, Urdu RTL

All AI runs on the server; every AI-generated output in the app is labelled **“AI-assessed”** .

شکریہ

Thank you

Every voice counts. ہر آواز اہم ہے۔

Try it live — speak a problem in your street and watch it reach the right people.
